Lab Learning Objectives:

In this lab session you will:

1. To understand Basic Document Creation and Formatting in Microsoft Word
2. To Design and Structure a Simple Presentation in Microsoft PowerPoint

Tools needed:

1. PC running Windows Operating System (OS)
2. Internet access

Important Tip # 1:

Students must backup all work saved on the computer to a cloud server (e.g., Google Drive, OneDrive etc.). Any work stored in any folder in the lab computer is deleted if the power goes down or when you log out of the station. Without backup, you will lose your work.

Also note use of USBs is highly discouraged in the labs or other public computers because of the possibility of virus contamination in either direction.

Microsoft Office Word

Microsoft Word is one of the most widely used word processing software applications, designed to create, edit, and format documents with ease. As part of the Microsoft Office suite, Word offers a comprehensive set of tools that allow users to produce professional-quality documents, from simple letters and resumes to complex reports and academic papers. With features like spell check, grammar suggestions, templates, and various formatting options, Word enhances productivity and ensures that documents are not only well-written but also visually appealing.

1. Creating and exploring a word document

1. To open MS word on your PC, go to the search bar at the bottom left, type 'Word,' and select Microsoft Office Word.
2. Once you have opened the document, familiarize yourself with the environment.

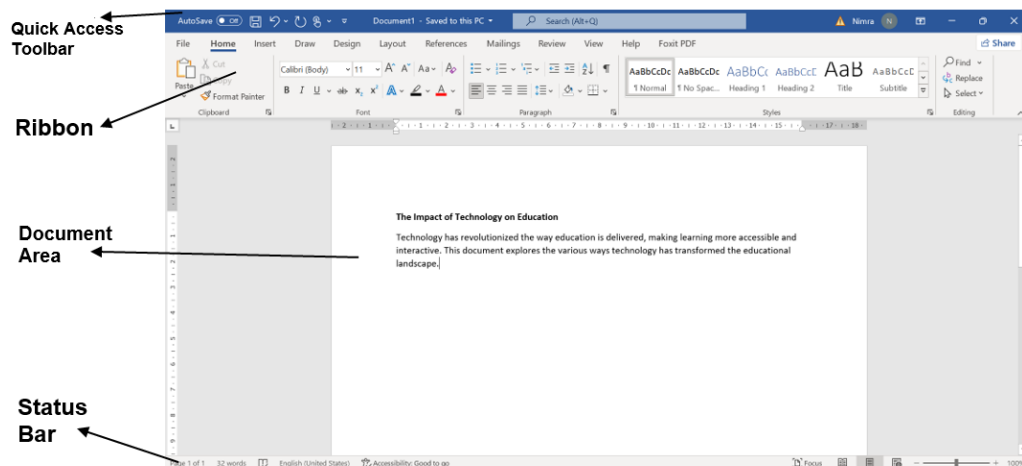

Figure 1: window of Microsoft Office Word

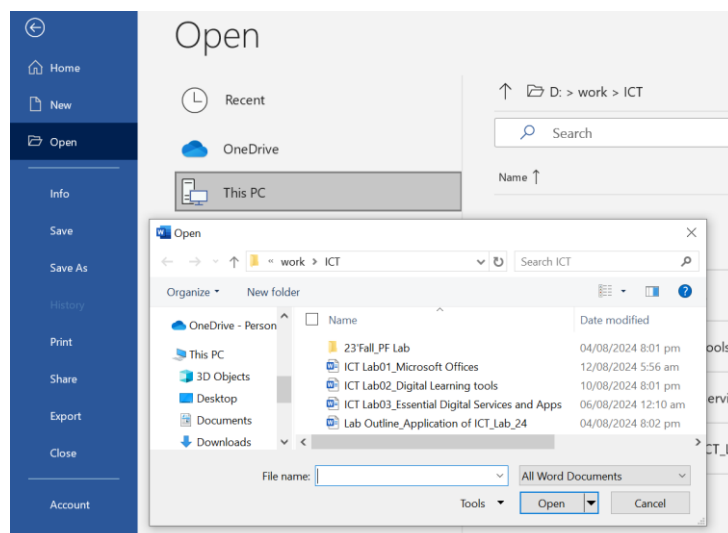

- i. **Explore the Ribbon:** the toolbar at the top containing Home, insert, Layout, Design and more.
- ii. **Quick Access Toolbar:** Located above the Ribbon, it provides shortcuts to commonly used commands (e.g., Save, Undo, Redo).
- iii. **Document Area:** The main area where you'll type and edit your content.
- iv. **Status Bar:** At the bottom, it shows page number, word count, and view options.

3. Now Click in the document area and start typing.

II. To open an existing document:

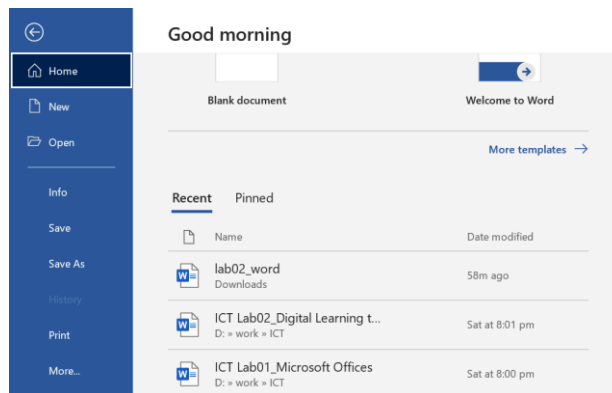

You can also open an already existing (present in your PC) word document.

1. Click the **File** tab. This takes you to **Backstage view**.
2. Select **Open**. The Open dialog box appears.

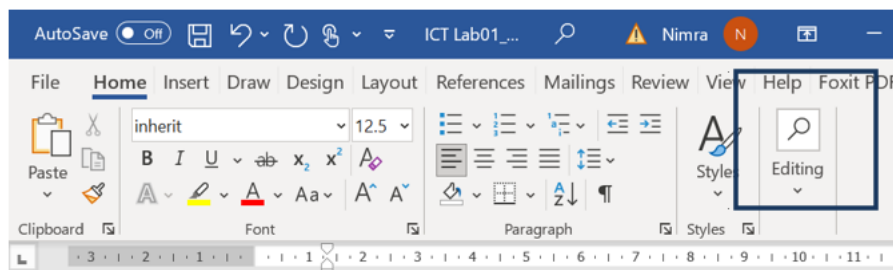

3. Select your document, then click **Open**.

If you've opened a file recently, you can also access it from the **Recent Documents** list. Just click on the **File** tab and select **Recent**.

III. To find text in word document:

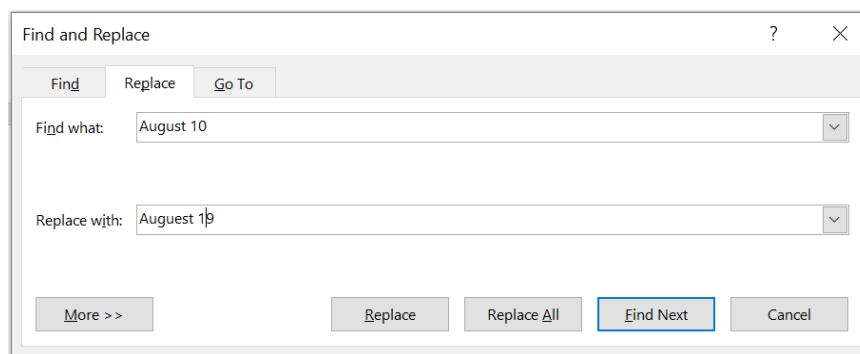

1. From the **Home** tab, click the **Find** command. The **navigation** pane will appear on the left side of the screen.

2. Type the text you want to find in the field at the top of the navigation pane.
3. If the text is found in the document, it will be highlighted in yellow, and a preview will appear in the navigation pane.

IV. To replace text in word document:

1. From the **Home** tab, click the **Replace** command. The **Find** and **Replace** dialog box will appear.
2. Type the text you want to find in the **Find what** field.
3. Type the text you want to replace it with in the **Replace with** field.
4. Click **Find Next** and then **Replace** to replace text. You can also click **Replace All** to replace all instances within the document.

Task 1: Find how many times the word “ICT” is used in this document? Can you replace it by “Information and communication technology” in the whole text.

Task 1: Find how many times the word “ICT” is used in this document? Can you replace it by “Information and communication technology” in the whole text.

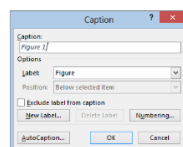

V. Formatting text

Formatted text can emphasize important information and help organize your document. In Word, you have several options for adjusting the **font** of your text, including **size**, **color**, and inserting special **symbols**. You can also adjust the **alignment** of the text to change how it is displayed on the page.

Application of **ICT** LAB NUCES, Peshawar Page 5 of 11

Introduction to Microsoft Offices

LAB: 01

Task 6: Add an image of application of **ICT below and add caption to the image.**

XI. Using styles

Word's large selection of **styles** and **themes** allows you to quickly improve the appearance of your document. Styles can give your document a more sophisticated look, while themes are a great way to change the tone of your entire document quickly and easily.

Task 6: Add an image of application of **ICT below and add caption to the image.**

XI. Using styles

Word's large selection of **styles** and **themes** allows you to quickly improve the appearance of your document. Styles can give your document a more sophisticated look, while themes are a great way to change the tone of your entire document quickly and easily.

To select a style:

1. Select the text you want to format.

AdWorks, Inc.
Sales Team Monthly Report
January 2010

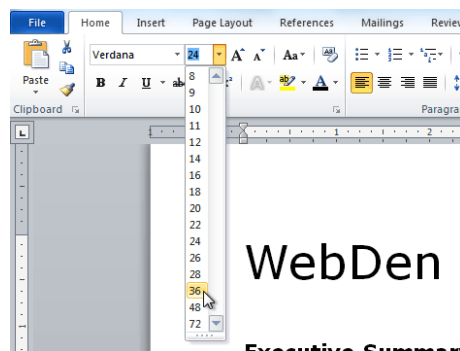

2. In the **Style** group on the **Home** tab, hover over each style to see a live preview in the

V. Formatting text

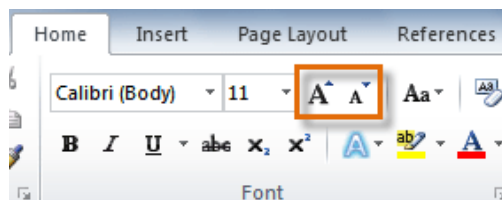

Formatted text can emphasize important information and help organize your document. In Word, you have several options for adjusting the **font** of your text, including **size**, **color**, and inserting special **symbols**. You can also adjust the **alignment** of the text to change how it is displayed on the page.

To change the font size:

1. Select the text you want to modify.
2. Click the **drop-down arrow** next to the **Font Size** box on the **Home** tab and Select the desired font size.

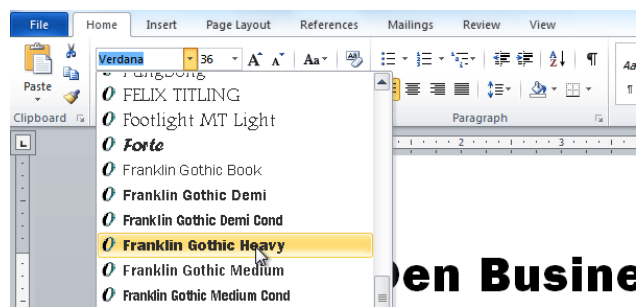

You can also use the **Grow Font** and **Shrink Font** commands to change the size.

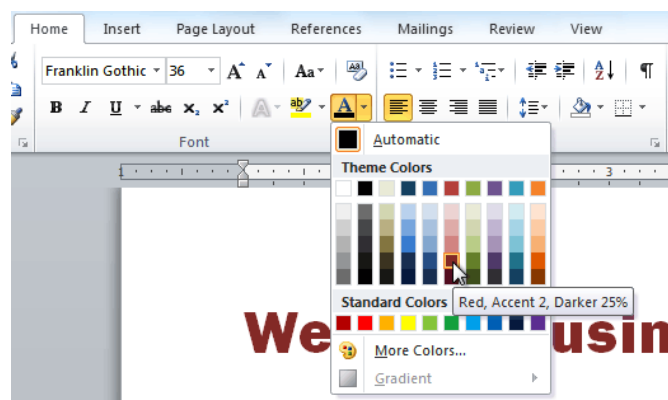

To change the font:

1. Select the text you want to modify.
2. Click the **drop-down arrow** next to the **Font** box on the **Home** tab. The **Font** drop-down menu appears.
3. Move the mouse pointer over the various fonts. A live preview of the font will appear in the document.

To change the font color:

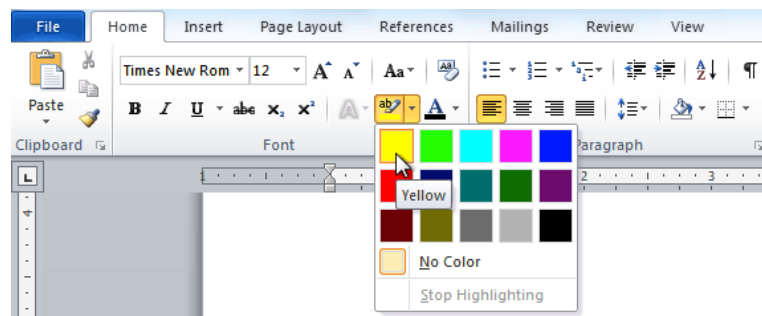

1. Select the text you want to modify.
2. Click the **Font Color** drop-down arrow on the **Home** tab. The **Font Color** menu appears.

Your color choices aren't limited to the drop-down menu that appears. Select **More Colors** at the bottom of the list to access the Colors dialog box. Choose the color you want, then click OK.

To highlight text:

1. From the **Home** tab, click the **Text Highlight Color** drop-down arrow. The **Highlight Color** menu appears.

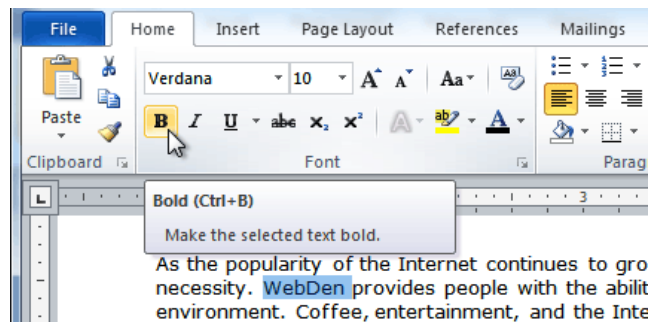

2. Select the text you want to modify. It will then be highlighted.

ication and entertainment, rather than a
 easing public demand for Internet access
 onment. WebDen's goal is to provide the
 mosphere for accessing the Internet.

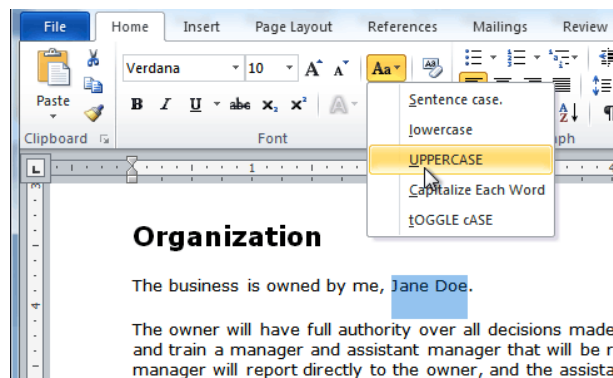

To use the bold, italic, and underline commands:

1. Select the text you want to modify.
2. Click the **Bold**, *Italic*, or Underline command in the **Font** group on the Home tab.

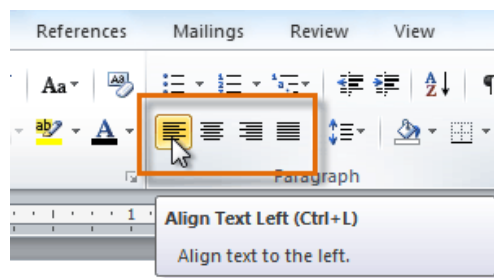

To change text case:

1. Select the text you want to modify.
2. Click the **Change Case** command in the **Font** group on the **Home** tab.

To change text alignment:

1. Select the text you want to modify.
2. Select one of the four **alignment options** from the **Paragraph** group on the **Home** tab.
 - **Align Text Left:** Aligns all selected text to the left margin
 - **Center:** Aligns text an equal distance from the left and right margins
 - **Align Text Right:** Aligns all selected text to the right margin
 - **Justify:** Aligns text equally on both sides and lines up equally to the right and left margins; used by many newspapers and magazines

Task 2: Write a summary about your first day at the university. Align the text centrally and highlight the heading, then apply the "Toggle Case" option to the heading. Make sure- the text is written in red color, and use a highlighter of a different color to emphasize key parts of the text.

FIRST DAY AT THE UNIVERSITY

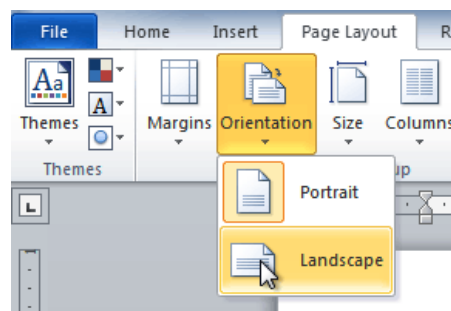

I woke up early with a racing heart, eager and nervous to see what campus life looked like. The campus felt huge, and I got a little lost trying to find my first lecture hall. A friendly student smiled and pointed me in the right direction. Sitting in class among total strangers felt strange at first, but sharing nervous smiles broke the ice. By lunch in the busy cafeteria, I had already chatted with a few new people and felt like I finally belonged. my first at the university was good.

VI. Page Layout

Page layout in a Word document allows you to control the appearance of your pages, including margins, orientation, and paper size.

To change page orientation:

1. Select the **Layout** tab.
2. Click the **Orientation** command in the Page Setup group.

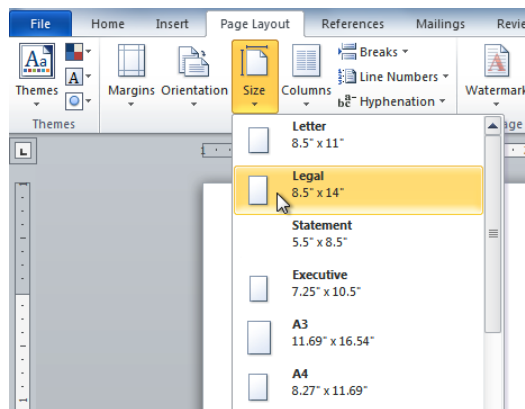

3. Click either **Portrait** or **Landscape** to change the page orientation.

Landscape format means the page is oriented **horizontally**, while **portrait** format means it is oriented **vertically**.

To change page size:

1. Select the **Page Layout** tab.
2. Click the **Size** command, and a drop-down menu will appear. The current page size is highlighted.

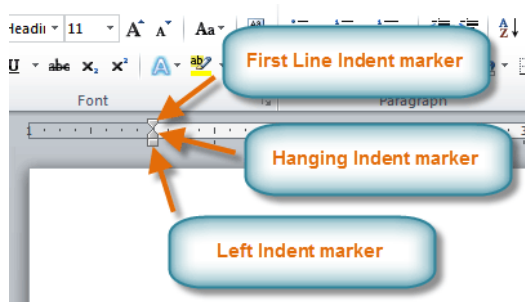

3. Click the **size option** you want. The page size of the document changes.

VII. Paragraph formatting**Indent**

Indenting in a Word document allows you to adjust the position of a paragraph relative to the page margins, helping to create a visually structured and organized layout.

To create or adjust a first-line indent or hanging indent:

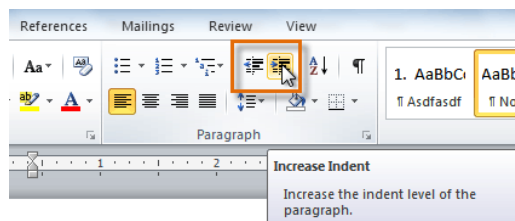

1. Place the **insertion point** anywhere in the paragraph you want to indent, or select one or more paragraphs.
2. To adjust the first-line indent, drag the **first-line indent marker** on the ruler.
3. To adjust the hanging indent, drag the **hanging indent marker**.
4. To move both markers at the same time, drag the **left indent marker**. This will indent all lines in the paragraph.

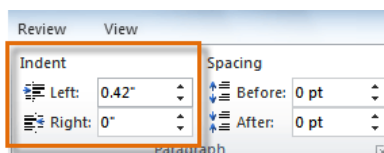

To use the Indent commands:

If you want to indent all lines in a paragraph, you can use the **Indent commands** on the **Home** tab.

1. Select the text you want to indent.
2. Click the **Increase Indent** command to **increase** the indent by increments of **1/2 inch**.

3. Click the **Decrease Indent** command to **decrease** the indent by **1/2 inch**.
4. To type indent amounts, use the **Indent fields** on the **Page Layout** tab.

**Task 3: For the given paragraph below:**

- Align it centrally.
- Apply a first-line indent to the paragraph.
- Use the Increase Indent command to adjust the indent for one of the paragraphs.

Peace of Mind and Good Health:

Peace of mind and good health are deeply interconnected, with each significantly contributing to the other. A peaceful mind fosters a sense of inner calm and reduces stress, which is essential for maintaining good health. When the mind is at peace, the body is less likely to experience the negative effects of stress, such as high blood pressure, weakened immunity, and chronic illness. Engaging in activities that promote relaxation, such as meditation, spending time in nature, or pursuing hobbies, can help cultivate peace of mind and, in turn, support overall well-being.

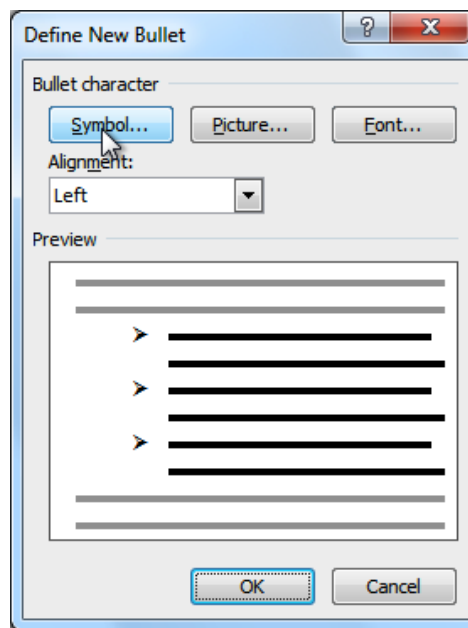

Conversely, good health lays the foundation for achieving peace of mind. When the body is healthy, free from pain and illness, the mind is more likely to be calm and focused. Regular exercise, a balanced diet, and adequate sleep are crucial components of good health, which directly influence mental and emotional stability. By taking care of physical health, individuals create the conditions necessary for a

VIII. Using bulleted and numbered lists

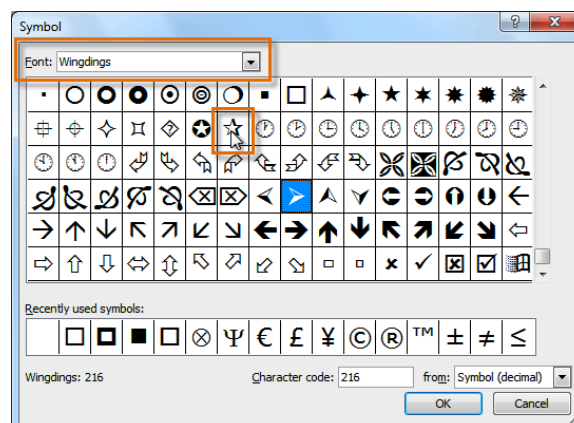

To create a list:

-
- Bullets and Numbering commands**
- References Mailings Review View
1. AaBbCc
- Recently Used Bullets
- Bullet List
- None
- Change List Level
- Define New Bullet...
- Bullets and Numbering drop-down arrows**
- Constr
 - Comput
 - Comm
 - Coffee
 - Insura
 - Rent: \$
 - Marketing: \$3,000
 - Legal: \$1,000

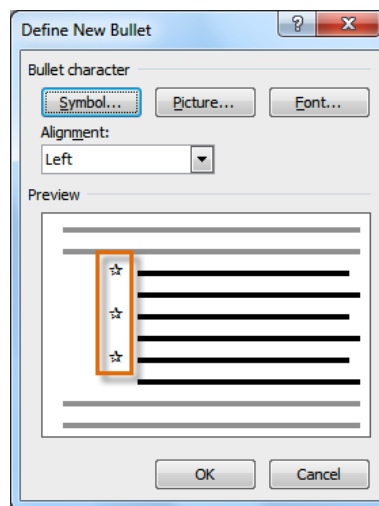

- Select an existing list.
- Click the **Bullets** drop-down arrow.
- Select **Define New Bullet** from the drop-down menu. The Define New Bullet dialog box appears.

- Click the **Symbol** button. The Symbol dialog box appears.
- Click the **Font** drop-down box, and select a font. The **Wingdings** and **Symbol** fonts are good choices because they have many useful symbols.

- Select the desired symbol, and click **OK**.

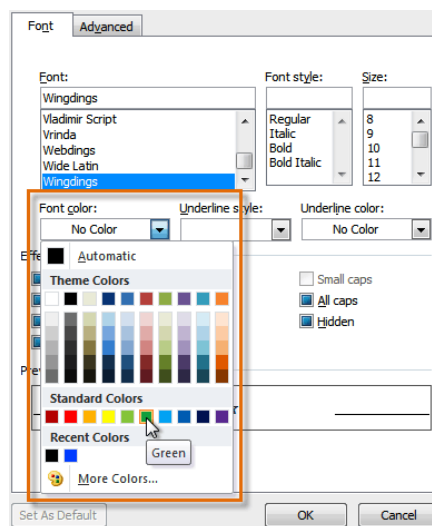

Click **OK** to apply the symbol to the list in the document.

You can use a picture as a bullet. Click the **Picture** button in the Define New Bullet dialog box, then locate the image file on your computer.

To change the bullet color:

1. Select an existing list and click the **Bullets** drop-down arrow.
2. Select **Define New Bullet** from the list. The Define New Bullet dialog box appears.
3. Click the **Font** button. The Font dialog box appears.

4. Click the desired color to select it and click **OK**.

Task 4:

Add bullet to the following list and also change the color of the bullets.

Fruit List:

Banana

Apple

Mango

Peach

Grapes

STEPS

Go to Home then Bullets and choose a bullet style.

To change the bullet color: Select the bulleted list. Right-click one of the bullets. Choose Font. Select your preferred Font Color. Click OK.

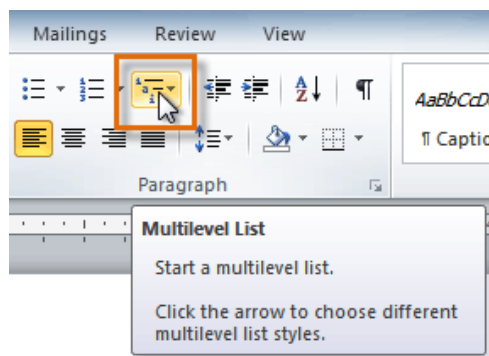

- Banana
- Apple
- Mango
- Peach
- Grapes

Multilevel lists

Multilevel lists allow you to create an **outline** with **multiple levels**. In fact, you can turn any bulleted or numbered list into a multilevel list by placing the insertion point at the beginning of a line and pressing the **Tab** key to change the level for that line.

To create a multilevel list:

- 1) Select the text you want to format as a multilevel list.
- 2) Click the **Multilevel List** command on the **Home** tab.

1. Click the bullet or numbering style you want to use. It will appear in the document.
2. Position your cursor at the end of a list item, then press the **Enter** key to add an item to the list.

Task 5: Write the names of three computer-related software programs and three hardware components related to a computer. Add a picture of a computer in the bullet. Use the multilevel list concept here too.

STEPS:

Go to Home Multilevel List and choose a multilevel style. Type Computer, then press Enter and use Tab to create the next level. Add Software Programs and Hardware Components as sublevels. For the main Computer bullet, go Home then Bullets then Define New Bullet Picture. Choose a computer picture/icon and click OK. Use Tab to move to a lower level and Shift + Tab to move back to a higher level.

COMPUTER

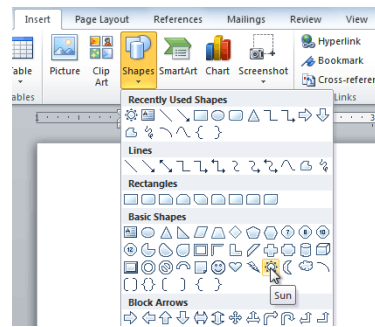

- **COMPUTER SOFTWARE**
 1. Microsoft
 2. MS office
 3. Google
- **COMPUTER HARDWARE**
 1. scanner
 2. speaker
 3. Printer

IX. Using shapes

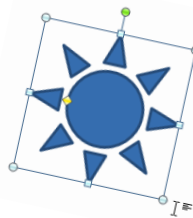

To use shapes effectively, you'll need to know how to **insert a shape** and **format** it by changing its **fill color**, **outline color**, and **shape style**, as well as add **3D effects**.

To insert a shape:

1. Select the **Insert** tab.
2. Click the **Shapes** command.

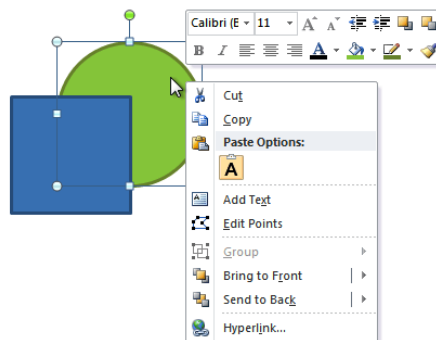

3. Select a shape from the drop-down menu.
4. Click and drag the mouse until the shape is the desired size. Also you can change the orientation of the shape.

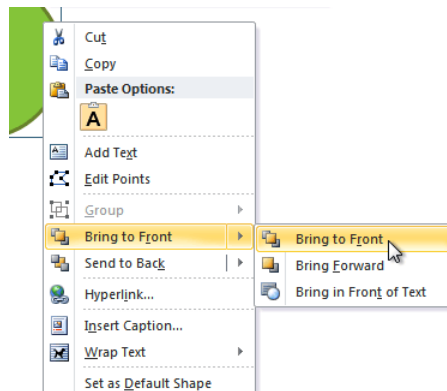

5. Release the mouse button.

To change the order of shapes:

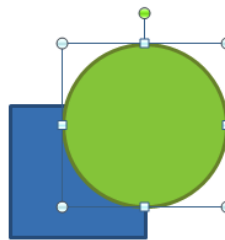

1. Right-click the shape you want to move.

2. In the menu that appears, hover over **Bring to Front** or **Send to Back**. Several ordering options will appear.

3. Select the desired ordering option. The shapes will reorder themselves.

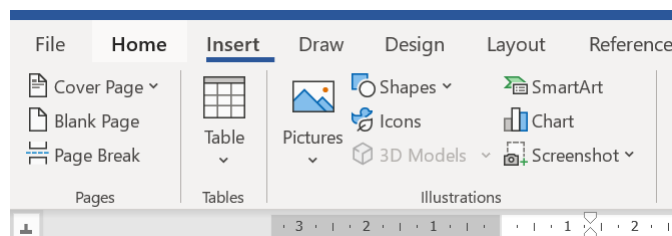

X. Inserting images

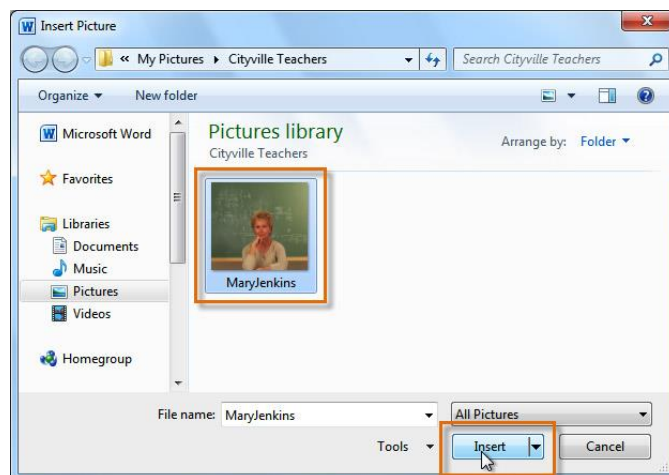

Adding **pictures** to your document can be a great way to **illustrate important information** or add **decorative accents** to existing text.

Inserting an image to word document:

1. Place your **insertion point** where you want the image to appear.
2. Select the **Insert** tab.
3. Click the **Picture** command in the **Illustrations** group. The Insert Picture dialog box appears.

4. Select the desired image file, then click **Insert** to add it to your document.

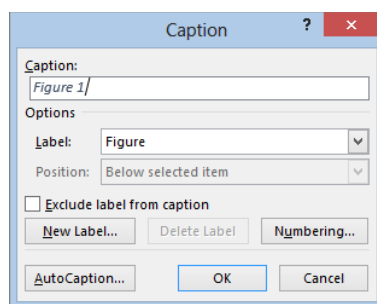

To resize an image, click and drag one of the **corner sizing handles**. You can also add caption to the image by right clicking on the image and selecting insert caption.

Change Text Wrapping around images:

1. Select the image.
2. Go to the Format tab.
3. Click Wrap Text in the Arrange group.
4. Choose the desired wrapping option.
5. Move the image to see how the text wraps around it.

Insert Caption:

- Click the picture you want to add a caption to.
- Click **References > Insert Caption** or **right click on the picture**.
- use the default label (Figure), type your caption in the **Caption** box.

Task 6: Add an image of application of ICT below and add caption to the image

STEPS:

1. Go to Insert tab. Select insert image.
2. Then select image from the desired image location
3. Then go to reference tab and select INSERT CAPTION.

Figure 2 Application of ICT

Using styles

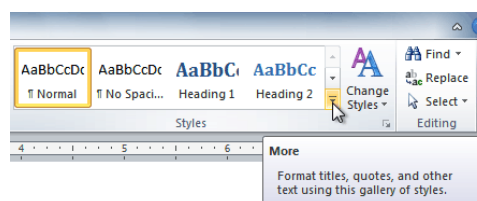

Word's large selection of **styles** and **themes** allows you to quickly improve the appearance of your document. Styles can give your document a more sophisticated look, while themes are a great way to change the tone of your entire document quickly and easily.

To select a style:

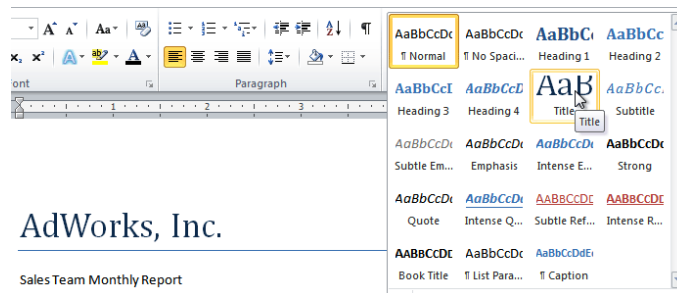

1. Select the text you want to format.

AdWorks, Inc.
Sales Team Monthly Report
January 2010

2. In the **Style** group on the **Home** tab, hover over each style to see a live preview in the document. Click the **More** drop-down arrow to see additional styles.

3. Select the style you want. The **selected text appears formatted** in the style.

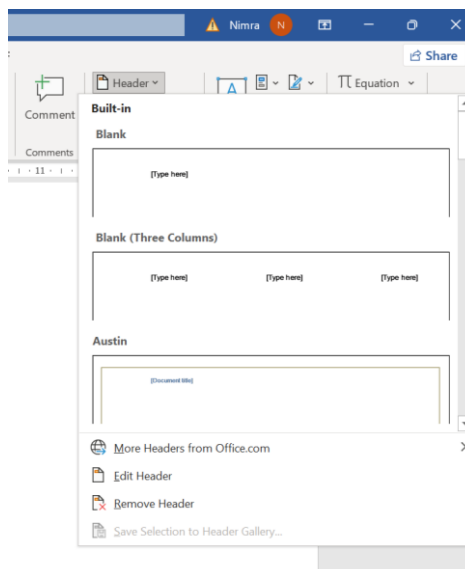

XI. Headers and footers

Headers and footers can help keep longer documents organized and make them easier to read. Text entered in the header or footer will appear on **each page** of the document.

To insert a header or footer:

1. Select the **Insert** tab.
2. Click either the **Header** or **Footer** command. A drop-down menu will appear.
3. From the drop-down menu, select **Blank** to insert a blank header or footer, or choose one of the **built-in options**.

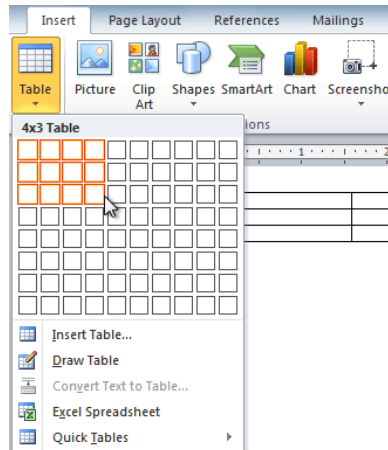

4. When you're finished, click **Close Header and Footer** in the **Design** tab, or hit the **Esc** key.

XII. Inserting and modifying tables

In Word, tables are useful for organizing and presenting data. You can create a **blank** table, **convert text** to a table, and apply a variety of **styles** and **formats** to existing tables.

To insert a blank table:

1. Place your insertion point in the document where you want the table to appear.
2. Select the **Insert** tab.
3. Click the **Table** command.
4. Hover your mouse over the diagram squares to select the number of **columns** and **rows** in the table.

5. Click your mouse, and the table appears in the document.
6. You can now place the insertion point anywhere in the table to add text.

Task 7: Edit the table given below by adding a new row and also change the table design.

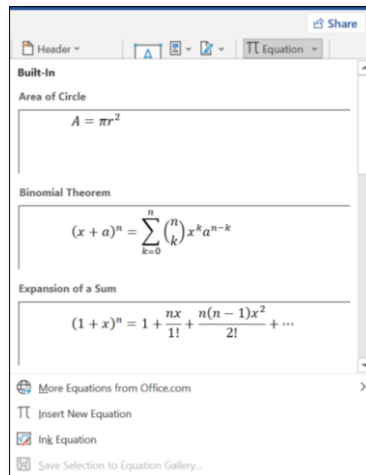

NAME	AGE	CITY
Kamran	15	Pakistan
Bisma	20	India
Rohit	40	Nepal
Aleena	18	Dubai

XIII. Equations

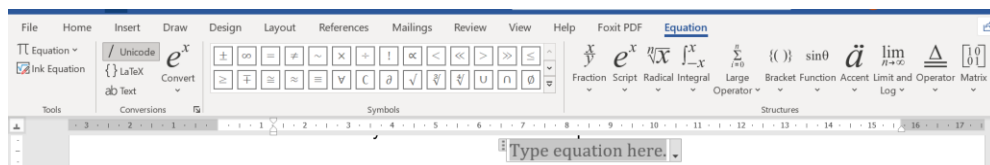

Adding equations to a Word document is straightforward and can be done using the built-in equation editor.

Adding an equation to the document

1. Click where you want to insert the equation in your document.
2. Click on the Insert tab in the ribbon.
3. Click on Equation in the Symbols group. A dropdown menu will appear.
4. You can either choose a pre-built equation or select Insert New Equation to create a custom one.

5. If you choose to insert a new equation, a placeholder will appear in the document.
6. You can now type your equation using the provided equation tools. Word will automatically format the text as an equation.

Task 8: Type following equation in word.

1. Go to insert tab
2. Then select Equation button.
3. To write subscript in the equation. Write: t₁ or etc

TASK NO. 8:

Type the following equation in word.

STEPS:

1. Go to insert tab
2. Then select Equation button.
3. To write subscript in the equation. Write: t₁ or etc

$$\frac{\Delta s}{\Delta t} = \frac{s(t_1) - s(t_0)}{t_1 - t_0}$$

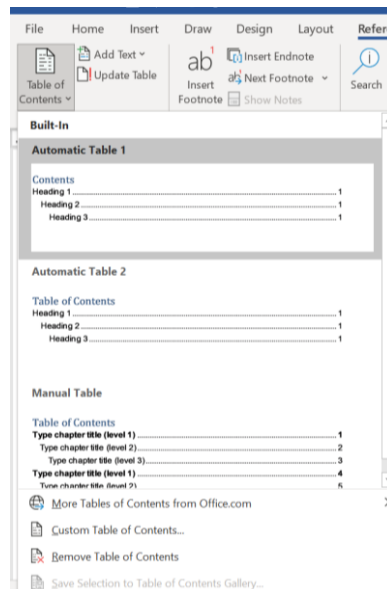

$$\frac{\Delta s}{\Delta t} = \frac{s(t_1) - s(t_0)}{t_1 - t_0}$$

XIV. Table of Contents:

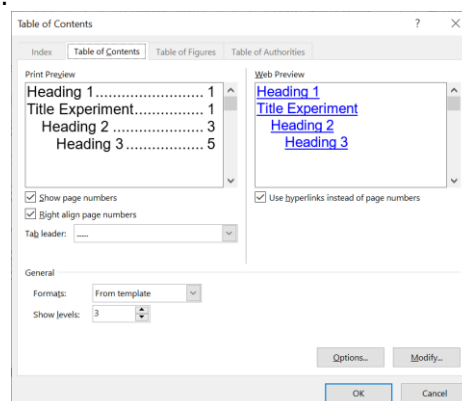

Adding a Table of Contents (TOC) in Microsoft Word is simple and helps organize your document by listing the headings and their corresponding page numbers.

Inserting Table of Contents

1. Click where you want to insert the TOC (usually at the beginning of the document).
2. Click on the References tab in the ribbon.

3. Click on Table of Contents in the Table of Contents group.
4. Choose an automatic TOC style from the dropdown menu. Word will generate a TOC based on the headings you've applied.
5. Click on "Custom Table of Contents." A new screen will appear, allowing you to select the sublevels as well.

XV. Saving the document:

1. Now save your document
 - i. Click File > Save As
 - ii. Double click on This PC (you can also save on one Drive), a new screen will appear.
 - iii. Choose a location, and save your document with an appropriate name.

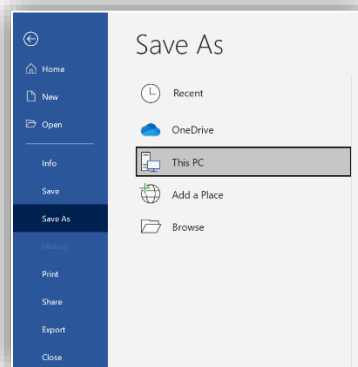

Figure 3: Saving the word document

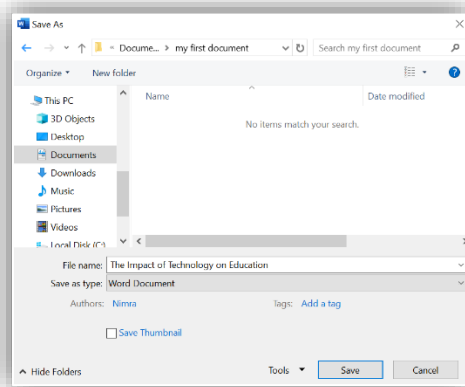

Figure 4: Selecting location and choosing name of the document

Important Tip # 2:

Develop a habit of pressing Ctrl+S or click File-->click Save whenever you make changes to your code, because if you do not do so and the computer accidentally shuts down you will lose work done since the last save command.

XVI. Reviewing documents

Let's say someone asks you to proofread a report. If you have a hard copy of the report, you might use a red pen to cross out sentences, mark misspellings, or add comments in the margins. However, you could also do all of these things in Word using the **Track Changes** and **Comments** features.

Tracking Changes

When you turn on the **Track Changes** option, all changes you make to the document show up as colored **markups**. If you delete some text, it won't disappear but instead will have a visible strike through it. If you add text, it will be underlined. This allows another person to see which changes have been made before making the changes permanent.

~~To Whom it May Concern~~Dear Mr. Powell:

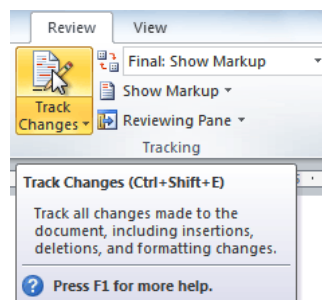

Thank you for taking the time to meet with me last Thursday about the Sales Associate position. I enjoyed meeting with you and touring the facility. I was very impressed with the layout of the showroom and with the competence of the staff at ~~your company~~Quality Furnishings. I would love the chance to work in such a productive and ~~very~~supportive atmosphere.

As we talked about in our meeting, my ~~many~~ years of sales experience, both in commissioned floor sales and in the role of Sales Supervisor, would greatly benefit Quality Furnishings. In that time, I have learned ~~many techniques~~ that would ~~drive~~increase sales and drive customer satisfaction ratings at Quality Furnishings.

The **color** of the markups will vary depending on who is reviewing the document, so if there are multiple reviewers, you'll be able to tell at a glance who made each change.

To turn on Track Changes:

1. Click the **Review** tab.
2. Click the **Track Changes** command. It should now be highlighted in gold to show that it is active.

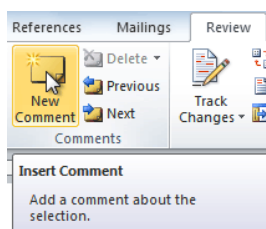

3. Any changes you make to the document will be shown as colored markups.
4. Click the **Track Changes** command again to turn it off.

Adding and deleting comments

Sometimes instead of changing something, you may want to make a **comment** about part of the document. Comments show up in **balloons** in the right margin and can be read by the original author or by any other reviewers.

To add a comment:

1. **Highlight some text**, or place the **insertion point** where you want the comment to appear.
2. From the **Review** tab, click the **New Comment** command.

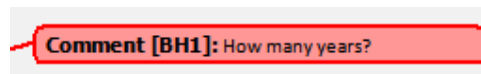

3. Type your comment.

my **many** years of sales experience, both in commissioned floor
visor, would greatly benefit Quality Furnishings. In that time, I

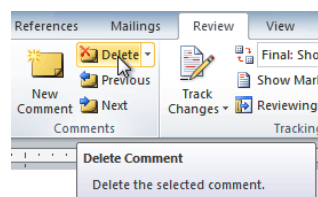

Comment [BH1]: How many years?

To delete a comment:

1. Select the **balloon** containing the comment you want to delete.

2. From the **Review** tab, click the **Delete** command.

Microsoft PowerPoint

Microsoft PowerPoint is a presentation software that enables users to create slideshows composed of text, images, videos, charts, and animations. It's widely used for creating and delivering presentations for business, educational, and personal purposes, offering a range of tools to design professional and engaging visual content.

I. *Creating and exploring a new Presentation:*

- I. Go to the search bar at the bottom left, type 'Power,' and select Microsoft PowerPoint.
- II. Once you have opened the document, a slide will appear.
 - i. **Ribbon:** The toolbar at the top with tabs like Home, Insert, Design, Transitions, and more.
 - ii. **Slides Pane:** On the left side, it shows a thumbnail view of all your slides.
 - iii. **Slide Area:** The central area where you edit and design individual slides.
 - iv. **Notes Pane:** At the bottom, where you can add notes for each slide.

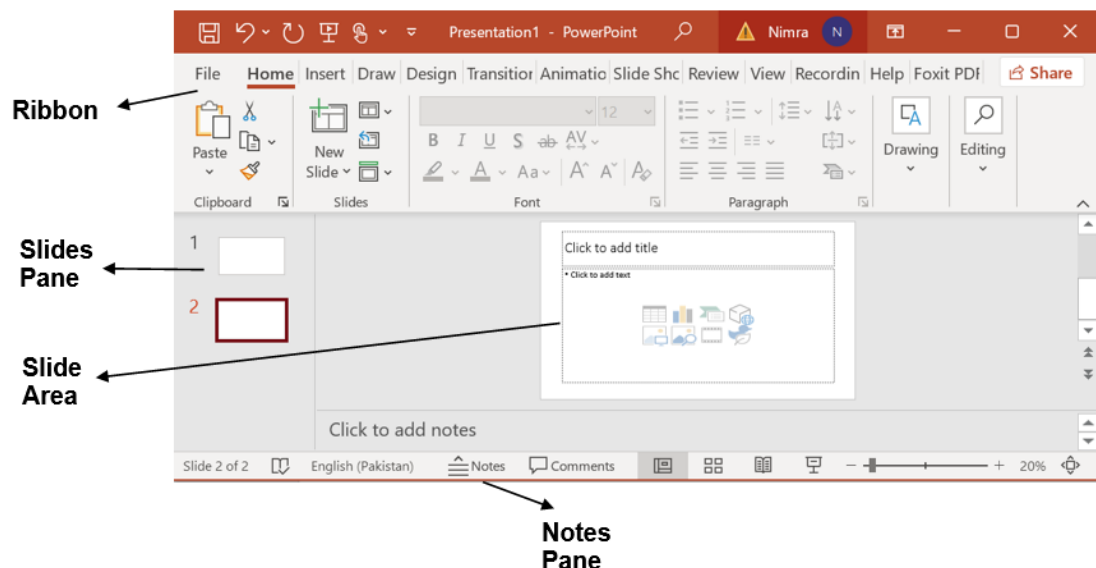

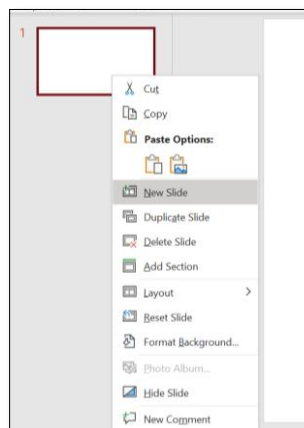

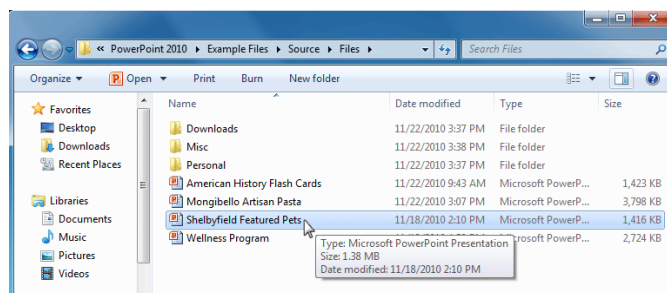

Figure 5: PowerPoint Slide

- III. Select a built-in template or theme from the Design tab to start with a pre-designed layout.
Or opt for a blank presentation to start from scratch if you prefer.
- IV. Click on the Home tab and select New Slide to add slides.

II. To open an existing presentation:

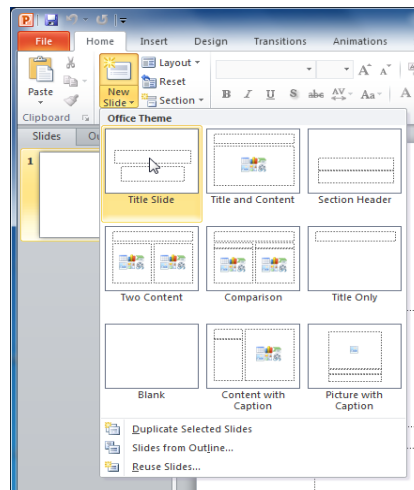

1. Click the **File** tab. This takes you to **Backstage view**.
2. Select **Open**. The Open dialog box appears.

3. Select your desired presentation, then click **Open**.

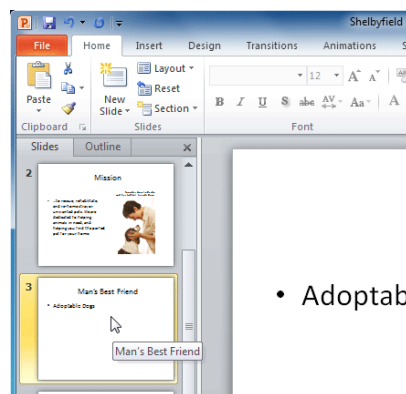

III. Slide Layout

Placeholders are arranged in different **layouts** that can be **applied to existing slides** or chosen in a **new slide**. A slide layout **arranges** content using different types of placeholders, depending on what information you might want to include in your presentation.

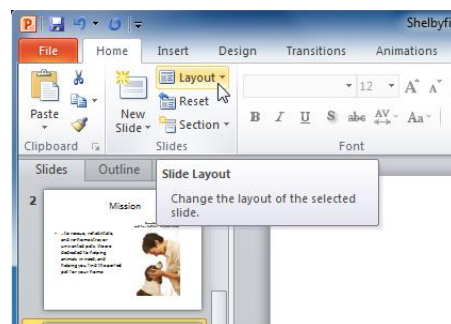

To change the layout of an existing slide:

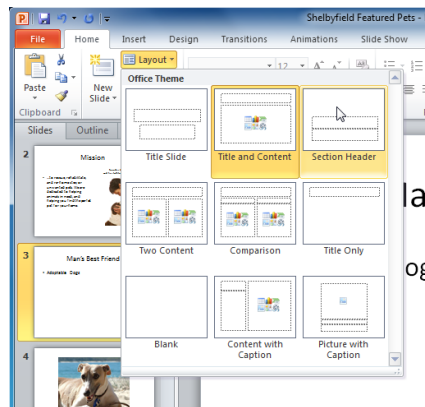

1. Select the slide you want to change.

2. Click the **Layout** command in the **Slides** group on the **Home** tab. A menu will appear with your options.

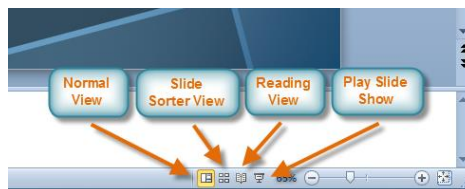

3. Choose a layout from the menu. The slide will change in the presentation.

IV. Slide views

The **slide view commands** are located on the bottom-right of the PowerPoint window.

Normal view: This is the default view where you create and edit your slides. You can also move slides in the Slides tab in the pane on the left.

Slide Sorter view: In this view, miniature slides are arranged on the screen. You can drag and drop slides to easily reorder them and to see more slides at one time.

Reading view: This view fills most of the computer screen with a preview of your presentation. Unlike Slide Show view, it includes easily accessible buttons for navigation, located at the bottom-right.

Slide Show view: This view completely fills the computer screen and is what the audience will see when they view the presentation.

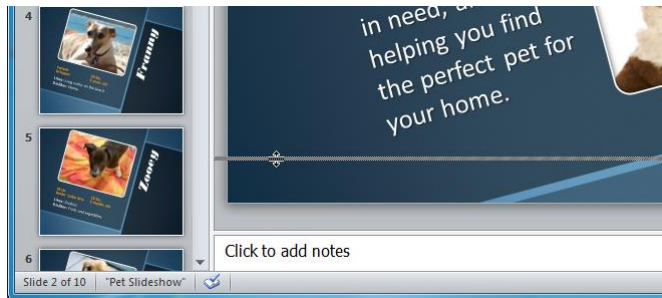

Press the Esc key to end the slide show.

V. Adding notes to slides

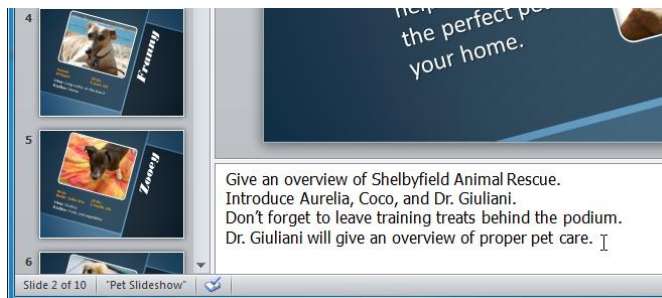

PowerPoint gives you the ability to add notes to your slides—often called **speaker notes**—to help you deliver or prepare for your presentation.

To use the Notes pane:

1. Locate the **Notes** pane at the bottom of the screen, directly below the **Slide** pane.
2. Click and **drag** the edge of the pane to make it larger or smaller.

3. Type your notes in the **Notes** pane.

VI. Adding Text

If you're new to PowerPoint, you'll need to learn the **basics of working with text** so you can add and arrange text on your slides.

To insert text

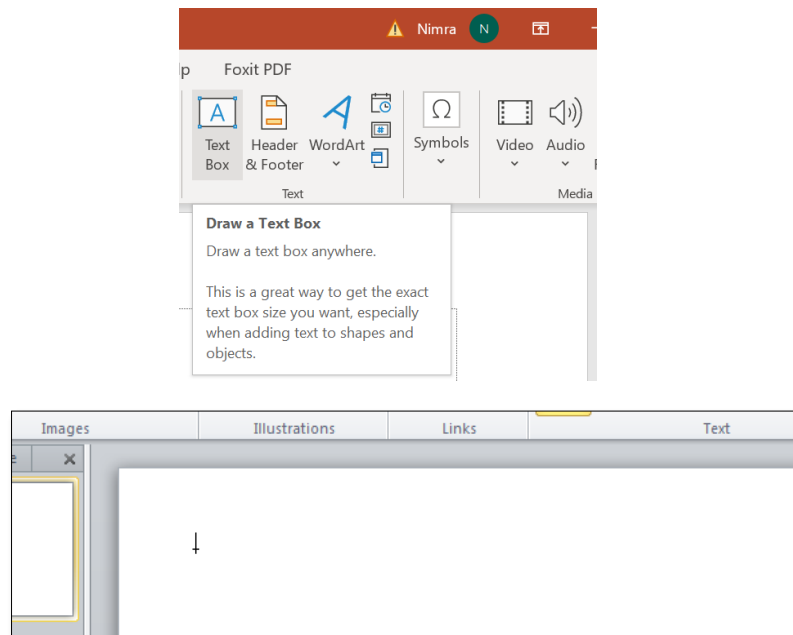

1. Click the placeholder or text box where you want to insert text.
2. To delete text, place the **insertion point** next to the text you want to delete and press the **Backspace** key.

To add a text box:

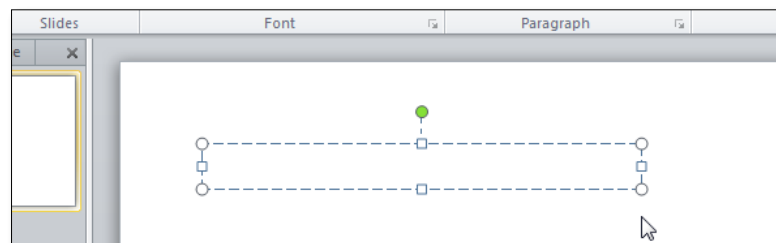

Inserting an extra **text box** allows you to **add** to the slide layout so you can include as much text as you want.

1. From the **Insert** tab, click the **Text Box** command.

2. Your cursor will turn into an **upside-down cross**.

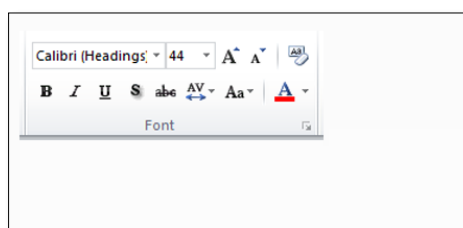

3. Click the area on your slide where you want to add a text box. A text box will appear with an **insertion point** inside.

VII. Formatting text

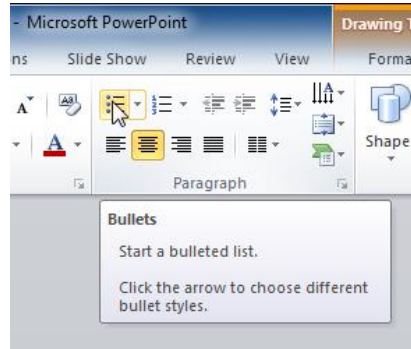

You can help your text stand out on the slide by changing its **formatting**, including font size, color, and style.

Click the buttons in the interactive below to learn about the different commands in the **Font** group.

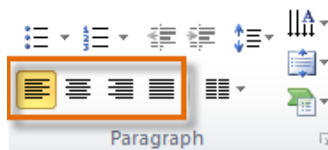

VIII. To insert a bulleted list:

1. Select the text box or specific text you want to format as a bulleted list.
2. Click the **Bullets** command in the **Paragraph** group on the **Home** tab.

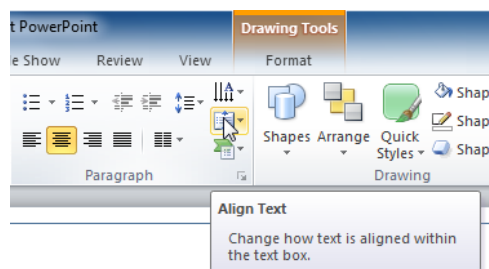

IX. To change horizontal text alignment:

1. Select the text you want to modify.
2. Select one of the four **alignment options** in the **Paragraph** group i.e., **Align Text Left**, **Center**, **Align Text Right** and **Justify**.

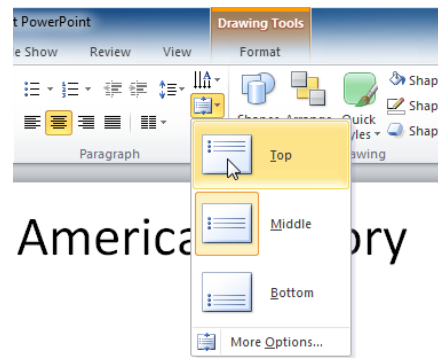

To change vertical text alignment:

1. Select the text you want to modify.
2. Click the **Align Text** command in the **Paragraph** group. A menu will appear.

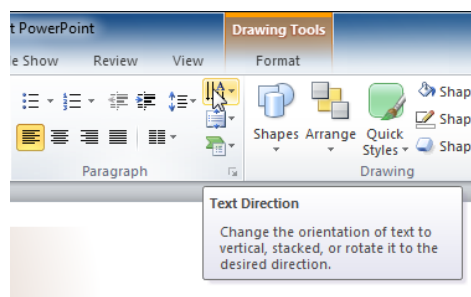

3. Choose to align the text at the **Top**, **Middle**, or **Bottom** of the text box.

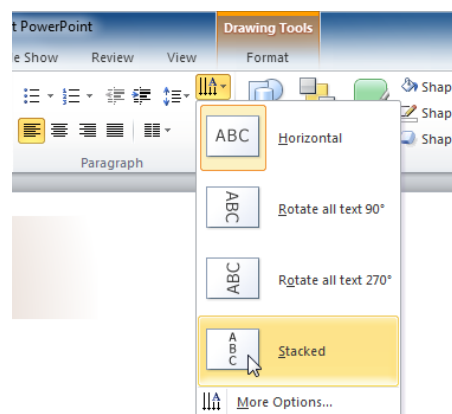

X. To change text direction:

1. Select the text you want to modify.
2. Click the **Text Direction** command in the **Paragraph** group. A menu will appear.

3. Choose for the direction of the text to be **Horizontal**, **Rotated**, or **Stacked**.

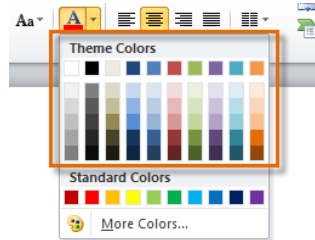

XI. Themes

A **theme** is a set of **colors, fonts, effects**, and more that can be applied to your **entire presentation** to give it a consistent, professional look.

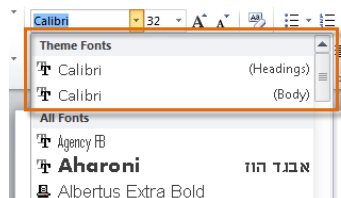

Theme elements

Every PowerPoint theme—including the default Office theme—has its own **theme elements**. These elements are:

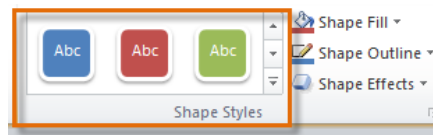

- **Theme Colors** (available from every **Color** menu)

- **Theme Fonts** (available from the **Font** menu)

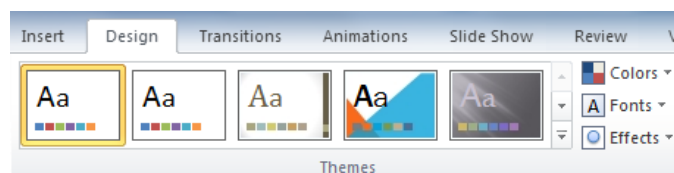

- **Shape Styles** (available in the **Format** tab when you click a shape)

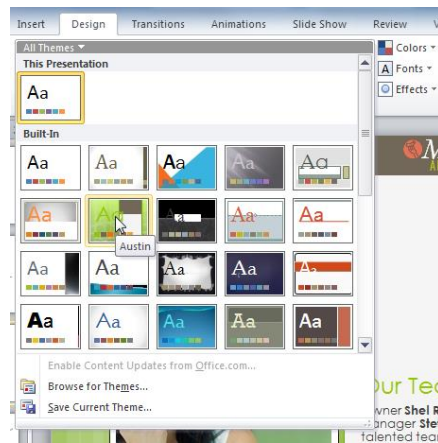

To apply a theme

1. Go to the **Design** tab.
2. Locate the **Themes** group. Each image represents a theme.

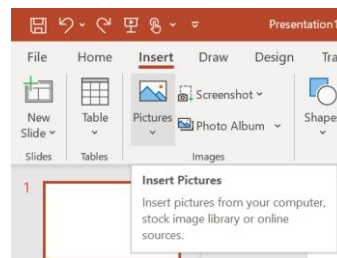

3. Hover over a theme to see a **live preview** of it in the presentation. The name of the theme will appear as you hover over it.

4. Click a theme to apply it to the slides.

XII. To insert an image from a file:

1. Select the **Insert** tab.
2. Click the **Picture** command.

3. Select the desired image file, then click **Insert**.
4. The picture will appear in your slide.

XIII. Applying transitions

If you've ever seen a PowerPoint presentation that had **special effects** between each slide, you've seen **slide transitions**. A transition can be as simple as fading to the next slide or as complex as a flashy, eye-catching effect.

There are **three categories** of unique transitions to choose from, all of which can be found on the **Transitions** tab:

- **Subtle** (slight transitions)

Subtle

None

Cut

Fade

Push

Wipe

Split

Reveal

Random Bars

Shape

Uncover

Cover

Flash

- **Exciting** (strong transitions)

Exciting

Dissolve

Checkerboard

Blinds

Clock

Ripple

Honeycomb

Glitter

Vortex

Shred

Switch

Flip

Gallery

Cube

Doors

Box

Zoom

- **Dynamic Content** (strong transitions that affect only the content, such as text or images)

Dynamic Content

Pan

Ferris Wheel

Conveyor

Rotate

Window

Orbit

Fly Through

To apply a transition:

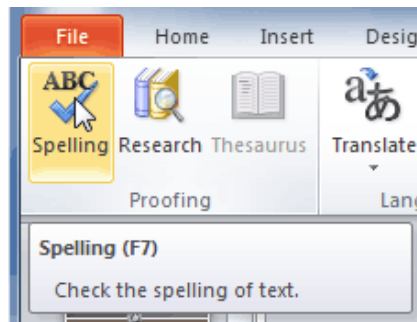

1. Select the **slide** you want to modify and click the **Transitions** tab.
2. Locate the **Transition to This Slide** group. By default, **none** is applied to each slide.
3. Click a **transition** to apply it to the selected slide. This will automatically preview the transition as well.

XIV. Checking spelling

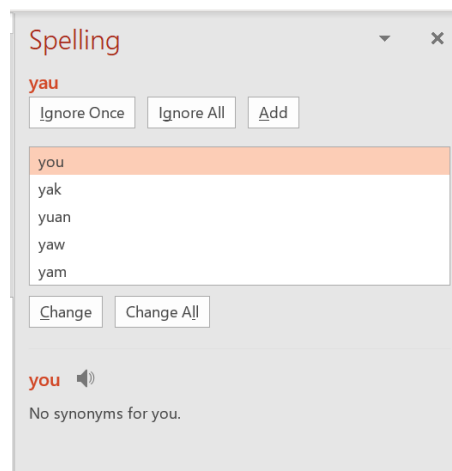

To make your slide show appear professional, you'll want to make sure it is free from **spelling** errors. PowerPoint has several options for checking your spelling. You can run a spell check, or you can allow PowerPoint to check your spelling **automatically** as you type.

To run a spell check:

1. Go to the **Review** tab.
2. Click the **Spelling** command.

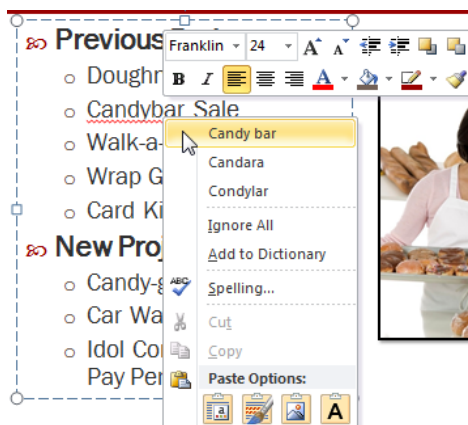

3. The **Spelling** dialog box will open. For each error in your presentation, PowerPoint will try to offer one or more **suggestions**. You can select a suggestion and then click **Change** to correct the error.

To use the automatic spell check feature:

1. Right-click the **underlined word**. A menu will appear.
2. Click the **correct spelling** of the word from the list of **suggestions**.

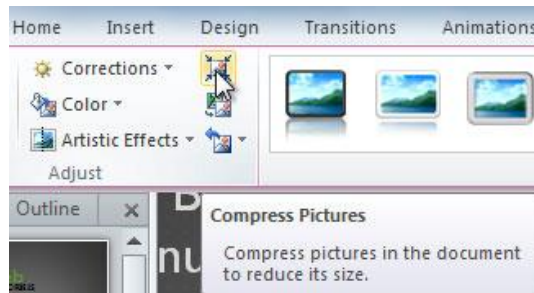

3. The corrected word will appear in the presentation.

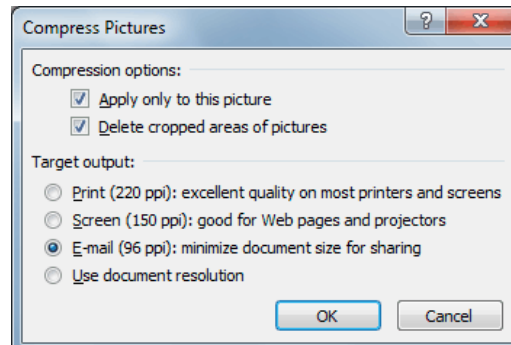

You can choose to **Ignore** an underlined word, **Add to Dictionary**, or go to the **Spelling** dialog box for more options.

XV. To compress a picture:

1. Select the picture. The **Format** tab will appear.
2. Select the **Format** tab.
3. Click the **Compress Pictures** command in the Adjust group. A dialog box appears.

4. Place a check mark next to **Delete cropped areas of pictures**. You can also choose whether to apply the settings to **this picture only** or to all pictures in the presentation.
5. Choose a **Target output**. If you are emailing your presentation, you may want to select **Email**, which produces the smallest file size.

XVI. Aligning objects

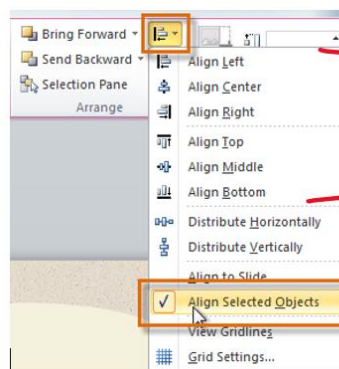

You can **click** and **drag objects** to align them manually, but guesswork will never give you the best result. Additionally, aligning objects in this way can take a great deal of time.

To align two or more objects:

1. Click and drag your mouse to form a **selection box** around the objects you want to align. All of the objects will now have **sizing handles** to show that they are selected.

2. From the **Format** tab, click the **Align** command, and select **Align Selected Objects**.
3. Click the **Align** command again, and select one of the six **alignment options**.

4. The objects will align to each other based on the option you have selected.

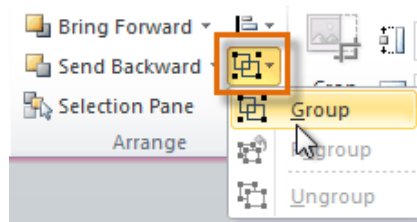

To group objects:

1. Click and drag your mouse to form a **selection box** around the objects you want to align. All of the objects will now have **sizing handles** to show that they are selected.

2. From the **Format** tab, click the **Group** command, then select **Group**.

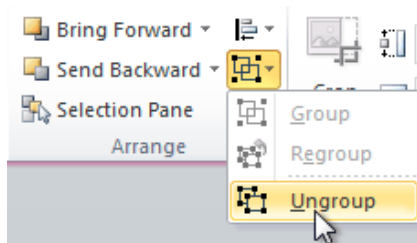

3. The selected objects will now be grouped. There will be a **single box with sizing handles** around the entire group to show that they are one object.

To ungroup objects:

1. Select the grouped object you want to ungroup.
2. From the **Format** tab, click the **Group** command, then select **Ungroup**.

XVII. Animation

PowerPoint offers a variety of **animations** you can use to enhance your presentation. Animations can be used to make text or objects **appear** on a slide, **exit** a slide, or **emphasize** the text or objects already on a slide.

The four types of animations

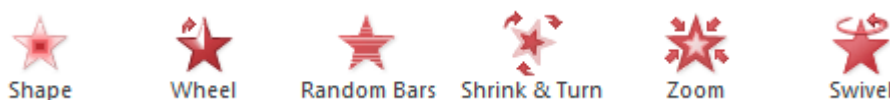

- **Entrance:** This control how the object enters the slide. For example, with the **Bounce** animation, the object will drop onto the slide and then bounce several times.

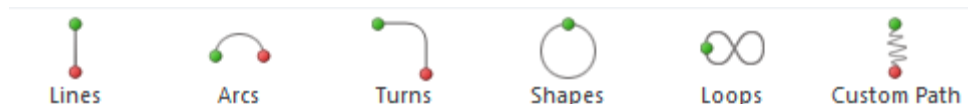

- **Emphasis:** These animations occur while the object is on the slide and are often triggered by a **mouse click**.

- **Exit:** This control how the object exits the slide. For example, with the **Fade** animation, the object will simply fade away.

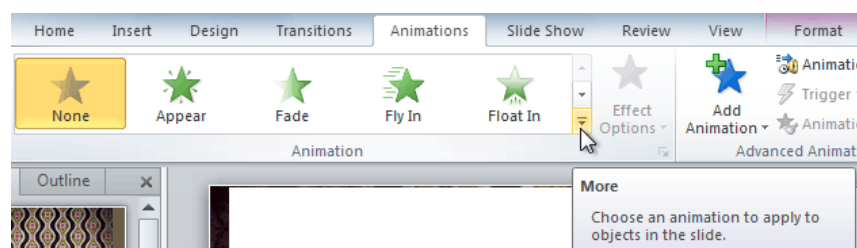

- **Motion Paths:** These are similar to **Emphasis** effects, except the object moves within the slide along a predetermined path, like a **circle**.

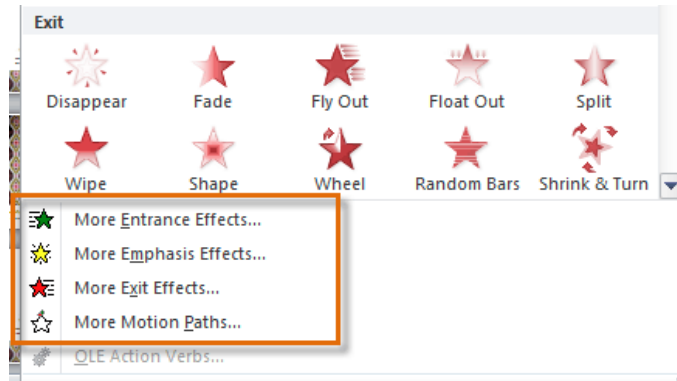

To apply an animation to an object:

1. Select an object.
2. Click the **Animations** tab.

3. Select the desired animation effect.
4. At the bottom of the menu, you can access even more effects.

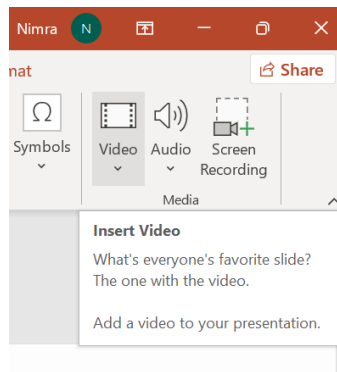

XVIII. Inserting videos

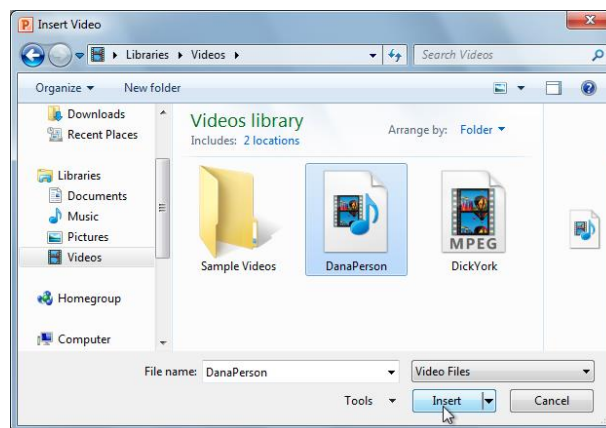

Adding a video to your presentation can help emphasize certain points and provide an example. Once you add a video, you can **edit** it and **format** its appearance.

To insert a video from a file on your computer:

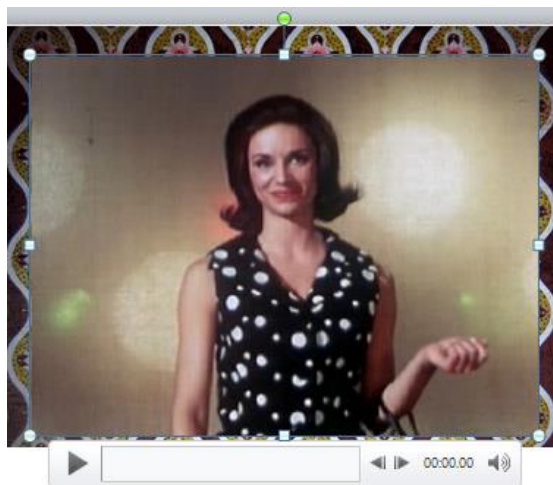

1. From the **Insert** tab, click the **Video** drop-down arrow and select **Video from File**.

2. Locate and select the desired video file, then click **Insert**.

3. The video will be added to the slide.

To preview the video:

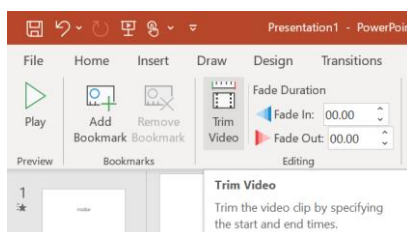

1. Make sure the video is selected.
2. Click the **Play/Pause** button below the video. The video will start playing, and the **timeline** next to the Play/Pause button will begin to advance.

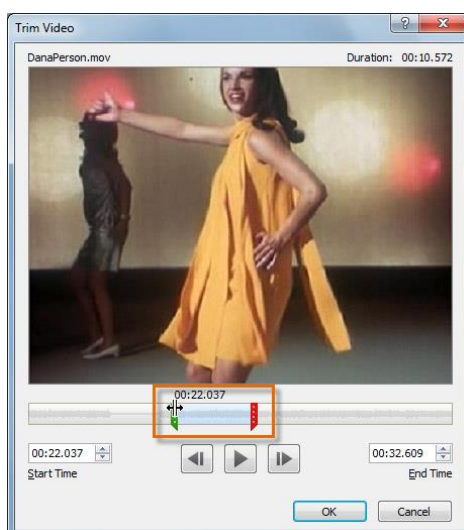

- To jump to a different part of the video, click anywhere on the **timeline**.

To trim the video:

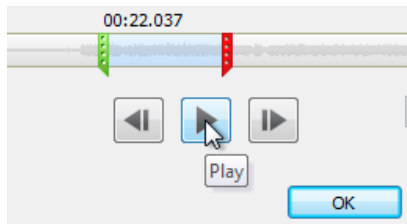

- From the **Playback** tab, click the **Trim Video** command. The Trim Video dialog box will appear.

- Use the **green** and **red** handles to set the start and end times.

- To preview the video file, click the **Play** button.

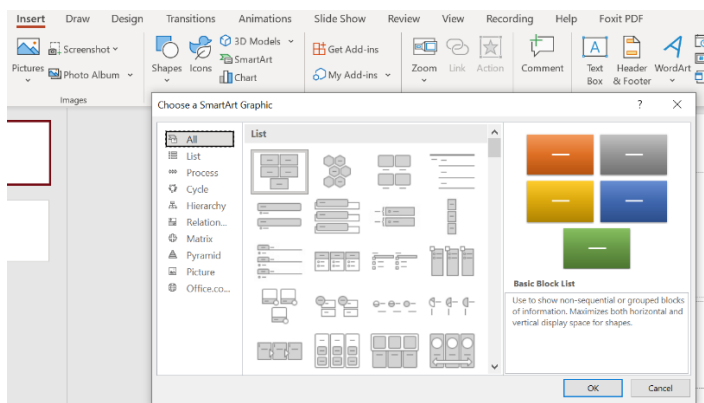

- Adjust the green and red handles again, if necessary, then click **OK**.

XIX. SmartArt graphics

PowerPoint has a variety of **SmartArt** graphics you can use to illustrate and organize different types of ideas.

To insert a SmartArt graphic:

- Select the **Insert** tab.
- Select the **SmartArt** command in the Illustrations group. A dialog box will appear.

- Select a **category** on the left of the dialog box and review the SmartArt graphics that appear in the **center**.
- Select the desired SmartArt graphic, then click **OK**.

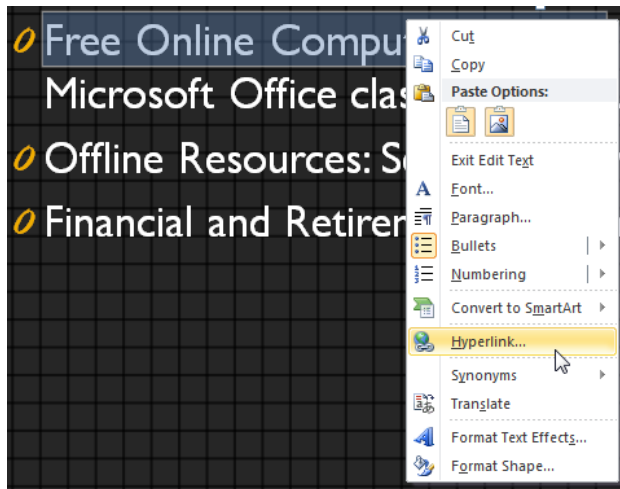

XX. Hyperlinks

Hyperlinks have **two basic parts**: the **address** of the webpage, email address, or other location they are linking to; and the **display text**, which can also be a picture or shape. For example, the address could be <https://www.youtube.com> and the display text could be **YouTube**. In some cases, the display text might be the same as the address. When you're creating a hyperlink in PowerPoint, you'll be able to choose both the address and the display text or image.

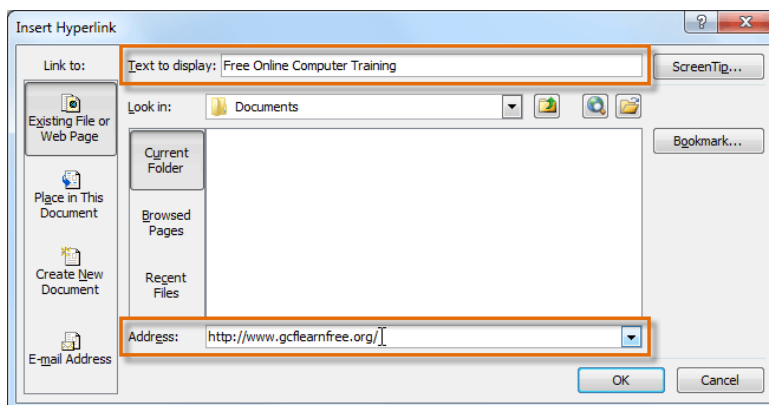

To insert a hyperlink:

- Select the image or text you want to make a hyperlink.

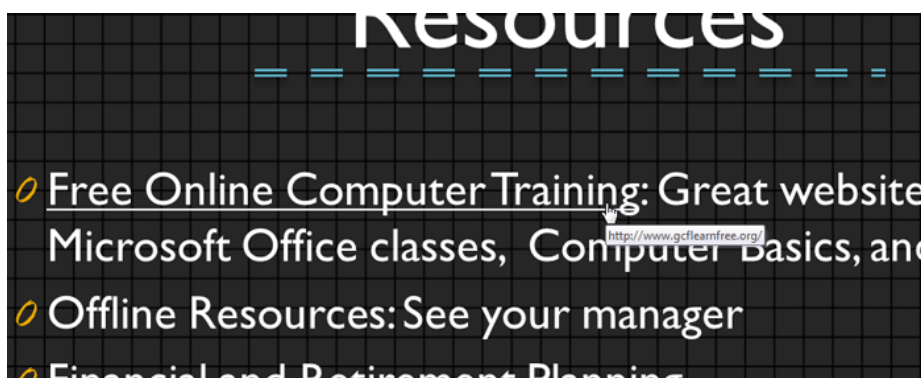

- Right-click the selected text or image, then click **Hyperlink**.

- The **Insert Hyperlink** dialog box will open. You can also get to this dialog box from the **Insert** tab by clicking **Hyperlink**.

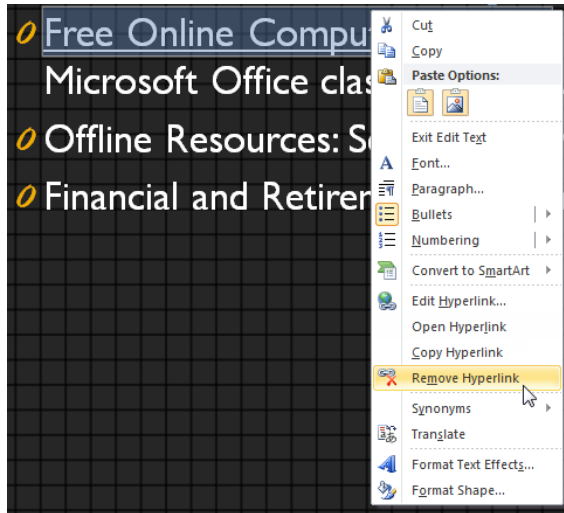

- If you selected text, the words will appear in the **Text to display** field at the top. You can change this text if you want.
- Type the address you want to link to in the **Address** field.
- Click **OK**. The text or image you selected will now be a hyperlink to the web address.

To remove a hyperlink:

1. Right-click the hyperlink.
2. Click **Remove Hyperlink**.

**XXI. Saving the document:**

2. Now save your document
 - iv. Click File > Save As
 - v. Double click on This PC (you can also save on one Drive), a new screen will appear.
 - vi. Choose a location, and save your document with an appropriate name.

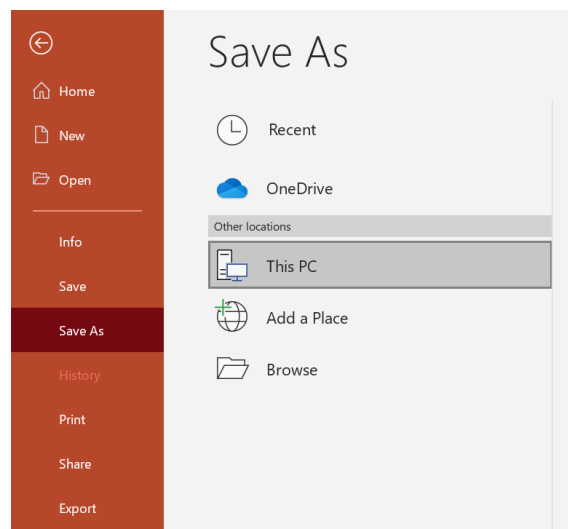

Figure 6: Saving the PowerPoint document

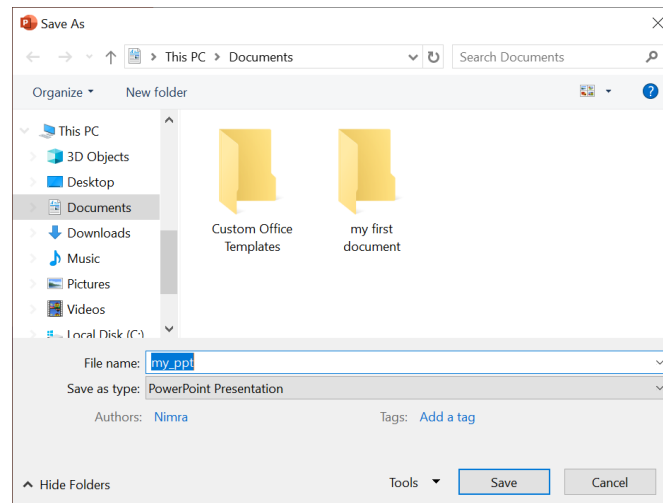

Figure 7: Selecting location and choosing name of the document

Exercise:**Task 1:**

1. Open Microsoft PowerPoint and create a new presentation.
2. Create a title slide with a simple title (e.g., "My Favourite Hobbies").
3. Insert an image related to the title of your presentation and adjust it appropriately.
4. Add at least 3 content slides, each dedicated to a different hobby (e.g., "Reading," "Cooking," "Traveling").
5. For each hobby, include:
 - i. Text: Write a brief description.
 - ii. Images: Insert at least one relevant image for each hobby.
 - iii. SmartArt: Create a SmartArt graphic to visually represent aspects of each hobby (e.g., steps in a recipe for cooking or locations visited for traveling).
6. Choose a professional theme from the Design tab that complements your content.
7. Customize the background of each slide with a colour or pattern that enhances the visual appeal of your presentation.
8. Customize the SmartArt graphics to match the overall design of the presentation.
9. Insert a short video clip (e.g., a video of you cooking or a book review) into one of the content slides.
10. Apply a basic transition effect between slides to make the presentation flow smoothly.
11. Add a unique transition effect for the title slide to make it stand out.
12. Add entrance animations to the text and images on each content slide.
13. For each slide, add notes explaining the content, images.

Context

2

Gardening

- Gardening is a healthy activity to make our body relaxed.
- We can grow beautiful flowers and plants through gardening.
- Gardening teaches us responsibility and consistency.

4

5

Travelling

- Travelling makes our body and mind fresh.
- Travelling is a very healthy hobby and release stress and tension
- We can explore the world and unique places by travelling

6

7

Book Reading

- We can gain infinite amount of knowledge from books.
- We can increase our vocabulary and spoken.
- Book reading can boost our confidence.

8

Task 2:

1. Perform the necessary formatting on any word document, including:
 - i. Create the front page.

- ii. Set the font size, colour.
- iii. Apply proper headings and styles where needed.
- iv. Add a table if necessary and also set its design.
- v. Align the text and data appropriately.
- vi. Add a header and footer to the page (header containing the name of the university and lab number; footer containing the date and page number).
- vii. Add page borders.
- viii. Run a spell check and correct any spelling mistakes.
- ix. Download a relevant image from Google related to time management, insert it into the Word file, and adjust it. Also, add a caption to the image.
- x. Add numbering (single or multilevel) where appropriate.
- xi. Add Table of Contents (containing two levels).
- xii. Add comments in your document.

1. INTRODUCTION

Time is one of the most valuable resources in human life. Every person has twenty-four hours in a day, but people use their time in different ways. Some people complete their work on time, while others struggle because they do not organize their time properly. Time management is an important skill for students and professionals. It helps people organize their activities, complete their responsibilities, and achieve their goals. For university students, time management is especially important because they have to attend classes, complete assignments, prepare for examinations, and manage their personal activities. Good time management can help students become more organized, productive, and successful.

1.1 MEANING OF TIME MANAGEMENT

Time management means planning and organizing how to use available time effectively.

It involves deciding:

- What tasks need to be completed.
- Which tasks are most important.
- How much time each task needs.
- When each task should be completed.

For example, if a student has an assignment due next week, they can work on it a little every day instead of waiting until the last day.

1.2 IMPORTANCE OF TIME MANAGEMENT

Time management is important because time cannot be stopped or recovered after it has passed. Good time management helps people:

1. Complete work on time.
2. Reduce stress.
3. Improve productivity.
4. Achieve their goals.
5. Stay organized.
6. Create more free time.

Students who manage their time properly can prepare better for assignments and examinations.

2. BENEFITS OF TIME MANAGEMENT

Time management has many benefits in academic, professional, and personal life. When people manage their time properly, they can focus on important activities and avoid wasting time.

2.1 INCREASED PRODUCTIVITY

Good time management increases productivity. When people make a plan, they know what they need to do and when they need to do it. This helps them focus on important tasks. For example, a student who follows a study timetable can complete their work more efficiently.

2.2 REDUCED STRESS

Poor time management can cause stress. Students may feel stressed when assignments are unfinished and examinations are approaching. Planning work in advance can reduce this pressure. Completing work step by step helps students avoid last-minute pressure.

2.3 BETTER ACADEMIC PERFORMANCE

Time management can improve academic performance. Students who manage their time effectively can:

- Attend classes regularly.
- Complete assignments before deadlines.
- Study regularly.
- Prepare for examinations.
- Revise their subjects.
- Balance study and personal activities.

Proper planning gives students enough time to understand their subjects.

3. TIME MANAGEMENT FOR STUDENTS

University students have many responsibilities. They need to attend classes, study, complete assignments, prepare presentations, and manage their personal lives. A good time management system can help students handle these responsibilities more easily.

3.1 SETTING GOALS

Goals give people direction. Students can have goals such as:

Applications of Information and Communication Technologies

- Getting good grades.
 - Completing assignments.
 - Learning new skills.
 - Passing examinations.
 - Graduating from university.
- Goals should be clear and realistic.

For example:

Instead of saying:

"I want to study more."

A better goal is:

"I will study for two hours every day."

Clear goals make it easier to manage time.

3.2 CREATING A DAILY SCHEDULE

A daily schedule helps students organize their activities. Here is an example:

TIME ACTIVITY

7:00 AM Wake up	7:00 AM Wake up
8:00 AM Breakfast	8:00 AM Breakfast
9:00 AM Study	9:00 AM Study
12:00 PM University Classes	12:00 PM University Classes
3:00 PM Lunch and Rest	3:00 PM Lunch and Rest
5:00 PM Assignment Work	5:00 PM Assignment Work
7:00 PM Dinner	7:00 PM Dinner
8:00 PM Revision	8:00 PM Revision

Table 1: Example of a Daily Time Management Schedule A schedule helps students remember their responsibilities and organize their day properly.

3.3 PRIORITIZING TASKS

Not every task has the same level of importance. Students should complete urgent and important tasks first.

Important Tasks

1. Assignment deadlines.
2. Upcoming examinations.
3. University projects.
4. Presentations.

Less Important Activities

- Spending too much time on social media.
- Watching unnecessary videos.
- Playing games for long periods.

Applications of Information and Communication Technologies

Prioritizing tasks helps students avoid missing important deadlines.

4. PROBLEMS CAUSED BY POOR TIME MANAGEMENT

Poor time management can create many problems. Some common problems include:

- Missing deadlines.
- Stress.
- Incomplete assignments.
- Poor academic performance.
- Wasting time.
- Forgetting important tasks.

4.1 PROCRASTINATION

Procrastination means delaying important work. For example, a student may have an assignment but continues saying: "I will do it tomorrow."

This can create serious problems when the deadline becomes close. Procrastination can cause stress, poor-quality work, and missed deadlines. Students can avoid procrastination by starting their work early and dividing large tasks into smaller parts.

4.2 DISTRACTIONS

Distractions can waste a lot of time. Common distractions include:

- Mobile phones.
- Social media.
- Video games.
- Television.
- Unnecessary conversations.

Students can reduce distractions by choosing a quiet place to study and putting their mobile phones away while working.

5. TIME MANAGEMENT TECHNIQUES

There are several useful techniques that can help people manage their time. These techniques help students stay organized and focused.

5.1 TO-DO LISTS

A to-do list contains tasks that need to be completed. Example To-Do List

- ☐ Complete university assignment.
- ☐ Study Chapter One.
- ☐ Prepare for examination.
- ☐ Complete presentation.

Applications of Information and Communication Technologies

☐ Review class notes.

After completing a task, students can check it off the list. This helps people stay organized and motivated.

5.2 THE POMODORO TECHNIQUE

The Pomodoro Technique is a useful method for improving concentration.

The process is simple:

1. Work for 25 minutes.
2. Take a 5-minute break.
3. Start working again.
4. Repeat the process.

After several sessions, a longer break can be taken. This technique helps students focus on their work without becoming too tired.

5.3 TECHNOLOGY AND TIME MANAGEMENT

Technology can help people manage their time. Useful tools include:

- Digital calendars.
- Reminder applications.
- Alarm applications.
- To-do list applications.
- Online planners.

Students can use these tools to remember assignment deadlines and important events. However, technology should be used wisely because mobile phones and social media can also become distractions.

6. TIPS FOR BETTER TIME MANAGEMENT

The following tips can help students manage their time effectively:

1. Create a daily schedule.
 2. Set clear goals.
 3. Complete important tasks first.
 4. Avoid procrastination.
 5. Reduce distractions.
 6. Use calendars and reminders.
 7. Take regular breaks.
 8. Get enough sleep.
 9. Avoid wasting time.
 10. Review your progress regularly.
- Following these habits can gradually improve time management skills.

TIME MANAGEMENT AND WORK-LIFE BALANCE

Time management does not mean working all the time. People also need time for:

- Family.
- Friends.

Page 7 of 8

Applications of Information and Communication Technologies

- Exercise.
- Hobbies.
- Sleep.
- Relaxation.

A healthy balance between work and personal life is important. Students should take breaks and get enough sleep because rest can improve concentration and productivity.

Figure 1 Time Management

7. CONCLUSION

Time management is an essential skill for success in education, work, and personal life.

Every person has the same twenty-four hours in a day. However, successful people learn how to use their time effectively.

Students who manage their time properly can complete assignments, prepare for examinations, reduce stress, and achieve their goals.

Good time management requires planning, discipline, prioritization, and consistency.

By creating schedules, setting goals, avoiding distractions, and completing important tasks on time, students can become more productive and successful.

Therefore, learning how to manage time effectively is an important step toward becoming a responsible and successful person.
